ACA X · AI FOR PRODUCT MANAGERS

# Pre-Course Assessment

A quick 3-minute check so we can tailor the pacing, examples, and teams to you. There are no wrong answers.

## 1. YOUR AI USAGE TODAY

**Q1 How do you use AI today?** (pick one)

- o Beginner: I chat with ChatGPT/Claude occasionally
- o Regular: I use AI daily for real work (writing, research, analysis)
- o Proficient: I build with AI (automations, agents, websites, prototypes)
- o Not yet: I've barely used it

**Q2 What have you actually done with AI?** (tick all)

- [ ] Written/edited docs or emails
- [ ] Summarized/analyzed docs or data
- [ ] Drafted a PRD / spec / user stories
- [ ] Built an automation (Zapier, n8n, Make, scripts)
- [ ] Built an app / website / prototype
- [ ] Created a custom GPT / Claude Project / agent
- [ ] None yet

**Q3 Which AI tools do you have right now?** (tick all)

[ ] ChatGPT / ChatGPT Plus [ ] Claude / Claude Pro [ ] Gemini
[ ] Claude Code / Cursor / an AI coding tool [ ] None yet

**Q4 Confidence writing a good AI prompt**

1 no idea | 2 | 3 | 4 | 5 reliably great

## 2. YOUR PM LEVEL & BACKGROUND

**Q5 Your current role** (pick one)

o PM (junior / mid) o Senior / Lead / Head of Product
o Product Owner / Business Analyst o Project / Program Manager
o Founder o Not in product yet
o Other (marketer, engineer, designer, ops): _____

**Q6 Years of product experience**

0-1 | 2-4 | 5-8 | 9+

**Q7 Your background is mostly** (pick one)

o Technical (engineering, data, CS) o Semi-technical (read data/specs, not code) o Non-technical

**Q8** **Data & building comfort** (tick all)

[ ] I can query data (SQL or similar) [ ] I can read basic code / a PR

[ ] I've shipped something live before [ ] None of the above

**Q9** **What tools does your team use daily?** (e.g. Jira, Figma, Notion, Slack, Amplitude)

## 3. THE OUTCOME YOU WANT

**Q10** **The ONE biggest outcome you want from the whole course** (pick one)

- o Use AI to do my PM work faster and better
- o Build a personal AI system / assistant around my workflow
- o Learn to build and ship real products myself
- o Build AI features and agents into products (specs, evals, guardrails)
- o Automate repetitive work so it runs without me
- o Become an AI-native PM

**Q11** **In one line: what would make this course a huge win for you?**

**Q12** **Optional: a real problem, product, or idea you'd like to build in the capstone.**

> **For the instructor.** Q1-Q4 bucket AI level (beginner / regular / proficient). Q5-Q8 bucket PM seniority + technical comfort. Q10-Q12 capture the goal and seed the capstone. Mix levels across pods; anyone at "None yet" on tools gets a nudge to set up Claude before Session 2.
